DETAILED ACTION

EXAMINER'S AMENDMENT

1. An examiner's amendment to the record appears below. Should the changes and/or additions be unacceptable to applicant, an amendment may be filed as provided by 37 CFR 1.312. To ensure consideration of such an amendment, it **MUST** be submitted no later than the payment of the issue fee.

Authorization for this examiner's amendment was given in a telephone interview with Christine Wilkes Beninati (Reg # 37,967) on 9/23/2009.

Claims 2 to 9, 12-14 are to remain as submitted on 6/9/2009.

Claim 1 is amended as follows:

1. (Currently Amended) An apparatus comprising a radio transmitter device in which data indicating a transport format combination is coded and combined with content data for incorporation in a radio packet, the apparatus comprising: a controller, a memory, and a program stored in the memory, wherein the controller is configured on the basis of the program: to store plural codes as a set of codes, each of said plural codes in said set of codes relating to and identifying respective corresponding transport format combination data to each of said plural codes in said set of codes having more bits than said corresponding transport format combination data, wherein each code in said set of codes is constituted by a first number of bits and wherein each code in said set of codes has the same number of bits as each other code in said set of codes: to operate in a full-rate channel mode, and to include in a radio packet when operating in the full-rate channel mode all of the first number of bits

Art Unit: 2617

comprising one of said plural codes, and to operate in a second mode in which data is transmitted on a channel at a transmission rate that is lower than a transmission rate of the full-rate channel mode, and to include in a radio packet when operating in the second mode, a part of one of said codes, wherein said part of said one of said codes comprises a second number of bits, wherein the second number of bits is less than the first number of bits, and to refrain from transmitting bits of the ~~code other than said first number of bits comprising said part of said one of said codes~~ said one of said plural codes other than said first number of bits comprising one of said plural codes.

END EXAMINER'S AMENDMENT***Response to Arguments***

1. Examiner acknowledges receipt of Amendment and Applicant Arguments filed on 6/09/09.
2. Applicant's arguments, see Applicant Arguments pages 7 to 10, filed 6/09/2009, with respect to claims 1 to 9, 12 to 14 have been fully considered and are persuasive.
3. The 35 USC 112 second paragraph rejection of claims 1, 3 and 5 has been withdrawn.
4. The 35 USC 102(e) rejection of claims 1, 2, 4 to 12 has been withdrawn.

Allowable Subject Matter

5. Claims 1, to 9, 12 to 14 are allowed.

Reasons for Allowance

6. The following is an examiner's statement of reasons for allowance: The applicant discloses a process of interleaving transport format indication data with content data. The applicant discusses to store plural codes as a set of codes, each of said plural codes in said set of codes relating to and identifying respective corresponding transport format combination data to each of said plural codes in said set of codes having more bits than said corresponding transport format combination data, wherein each code in said set of codes is constituted by a first number of bits and wherein each code in said set of codes has the same number of bits as each other code in said set of codes: to operate in a full-rate channel mode, and to include in a radio packet when operating in the full-rate channel mode all of the first number of bits comprising one of said plural codes, and to operate in a second mode in which data is transmitted on a channel at a transmission rate that is lower than a transmission rate of the full-rate channel mode, and to include in a radio packet when operating in the second mode, a part of one of said codes, wherein said part of said one of said codes comprises a second number of bits, wherein the second number of bits is less than the first number of bits, and to refrain from transmitting bits of said one of said plural codes other than said first number of bits comprising one of said plural codes.
7. The prior art made of record, Hwang (US 2003/0072290 A1), discloses a process of multiplexing coded symbols such the first coded TFCI symbols

Art Unit: 2617

and the second coded TFCI symbols are uniformly distributed with content data. Hwang further discloses varying the encoding to different portions of the TFCI bits, however, Hwang fails to disclose to operate in a full-rate channel mode, and to include in a radio packet when operating in the full-rate channel mode all of the first number of bits comprising one of said plural codes, and to operate in a second mode in which data is transmitted on a channel at a transmission rate that is lower than a transmission rate of the full-rate channel mode, and to include in a radio packet when operating in the second mode, a part of one of said codes, wherein said part of said one of said codes comprises a second number of bits, wherein the second number of bits is less than the first number of bits, and to refrain from transmitting bits of said one of said plural codes other than said first number of bits comprising one of said plural codes.

Conclusion

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
